## International Project Engineering, Bachelor

Foundations of Project	Leadership
Study Program	International Project Engineering
Study level and semester	Bachelor, 1 <sup>st</sup> Semester
ECTS Credits	2
Hours per week /	2/30
total contact hours	
Total hours of study	90
Type/Teaching Method	Seminar-style lecture
Language of instruction	English
Frequency	Every Semester
Course	Prof. DrIng. Jochen Brune, MBA
Coordinator/Instructor	E-Mail: Jochen.brune@reutlingen-university.de
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course
Prerequisites:	None
Course learning objectives:	At the end of the course students should:  Professional competencies  be able to describe the fundamental principles of leadership in projects.  Methodological competencies  be able to describe and apply the fundamental methods and techniques for project leadership.
	<ul> <li>Social competencies</li> <li>be able to analyze communication failures and create communication strategies in leadership situations. Conflicts and negotiation situations are understood and actively managed. The fundamentals of human motivation, personal preferences and team behavior are understood and practically applied to lead a project to success.</li> </ul>
	<ul> <li>Personal competencies</li> <li>develop an understanding of the requirements towards a project leader. At the end of this course students solve complex leadership problems individually as well as in a team setup.</li> </ul>
	<ul> <li>International competencies</li> <li>gain insights into the challenges of leading international projects. They are able to express</li> </ul>

	the results of their analysis using correct technical terms in the English language.
Contents:	Fundamental methods and techniques for project leadership: Creativity techniques, problem solving techniques, communication and communication failures, communication in leadership situations, conflicts and conflict management, Negotiation, personality & preferences, influencing others, motivation, team management, virtual teams
Textbooks:	<ul> <li>Meredith, Jack; Mantel, Samuel: 'Project Management – A Managerial Approach', 9th ed. (International Student Version), Wiley, 2015</li> <li>de Bono, Edward: Serious Creativity. Stuttgart: Schäffer-Poeschel, 1996.</li> <li>Additional:         <ul> <li>Kerzner, Harold: 'Project Management: A Systems Approach to Planning, Scheduling, and Controlling', John Wiley &amp; Sons; 12th Ed. (2017)</li> <li>Kompetenzbasiertes Projektmanagement (PM3) (für GPM Level A-D) Handbuch für die Projektarbeit, Qualifizierung und Zertifizierung auf Basis der IPMA Competence Baseline Version 3.0, GPM Deutsche Gesellschaft für Projektmanagement / Michael Gessler (Hrsg.), 4. Auflage, GPM, Nürnberg, 2011</li> </ul> </li> </ul>
Assessment	Graded: Case Study and Written Exam  Fall Semester: Exam takes place the week before Christmas break. Students who wish to take the exam must be in Reutlingen for the exam.

Foundations of Project Planning	
Study Program	International Project Engineering
Study level and semester	Bachelor, 2 <sup>nd</sup> Semester
ECTS Credits	3
Hours per week /	2/30
total contact hours	
Total hours of study	120
Type/Teaching Method	Seminar-style lecture
Language of instruction	English
Frequency	Every Semester
Course Coordinator/Instructor	Prof. DrIng. Jochen Brune, MBA E-Mail: Jochen.brune@reutlingen-university.de
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course
Prerequisites:	None
Course learning objectives:	<ul> <li>At the end of the course students should:         Professional competencies         be able to describe the fundamental principles of project management.     </li> <li>Methodological competencies</li> <li>be able to practically apply important methods and techniques of classical project management to successfully plan a project. They are able to plan a project regarding scope, schedule, cost and quality. They are able to analyze a given project in detail and to optimize it regarding scope, schedule, cost and quality.</li> <li>Personal competencies</li> <li>understand why structuring and planning are prerequisites for successful execution of complex projects.</li> <li>International competencies</li> <li>be able to analyze the context of an international project. They are able to express the result of their analysis using correct technical terms in English.</li> </ul>
Contents:	Introduction to classical project management methods and techniques, with the focus on structured project planning and optimization.  Fundamental principles of project management: Projects, triple constraint, differences between working in projects and working in operations, project success and failure, tasks of a project manager, project organisation forms, forms of project lifecycle, activities at project start, project management core processes (planning, project start, project execution, project controlling, project closing), supporting and facilitating processes.

-	
	Methods of classical project management: Project proposal, Product Breakdown Structure (PBS), Work Breakdown Structure (WBS), Work Package Descriptions (WPD), Project Network Diagram (PND) (activity sequencing), Project schedule, effort and duration estimation, Organisational Breakdown Structure (OBS), Responsibility Assignment Matrix (RAM), resources plan, resources optimization, cost structure plan, project budget plan, introduction to Discounted Cash Flow (DCF) techniques (Net Present Value (NPV), Internal Return Rate (IRR))
Textbooks:	<ul> <li>Fundamentals</li> <li>Meredith, Jack; Mantel, Samuel: 'Project Management – A Managerial Approach', 9th ed. (International Student Version), Wiley, 2015</li> <li>Jenny, Bruno: 'Projektmanagement', vdf Hochschulverlag, Zürich 2005</li> <li>Additional:         <ul> <li>Kerzner, Harold: 'Project Management: A Systems Approach to Planning, Scheduling, and Controlling', John Wiley &amp; Sons; 12th Ed. (2017)</li> <li>Basiszertifikat im Projektmanagement (GPM) GPM Deutsch Gesellschaft für Projektmanagement / Michael Gessler (Hrsg.)GPM Deutsche Gesellschaft für Projektmanagement e.V., 2010, ISBN: 9783942660136, 854 Seiten 3. Auflage</li> </ul> </li> </ul>
Assessment	Graded: Written exam  Fall Semester: Students who wish to take the exam must be in Reutlingen for the exam.

Finance	
Study Program	International Project Engineering

ECTS Credits	3
Hours per week /	2/30
total contact hours	
Total hours of study	90
Type/Teaching Method	Lecture, case studies, group tasks
Language of instruction	English
Frequency	Every Semester
Course	Prof. Dr. Antje Brüsch
Coordinator/Instructor	E-Mail: Antje.Bruesch@Reutlingen-University.DE
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course
Prerequisites:	
Course learning objectives:	At the end of the course students should:  Professional competencies  be able to make decisions related to investments / evaluate, which alternatives are the best from an economic perspective (regarding investment).  be able to discuss and evaluate the pros and cons of different financing alternatives and decide which one is the best, regarding the specific financial circumstances of a company.  have understood basic concepts of investment appraisal and corporate finance and apply them in real-life situations.  Methodological competencies  be trained in analytical and methodical competences, related to investment decisions based on the circumstances a company is facing.  be qualified to define targets, plan investments and the associated financing and therefore select appropriate methods, measures and tools.  Social competencies  learned to deal with each other and develop respect for one another through group discussions and practical exercises in teams.  International competencies
Contents:	<ul> <li>Improved their English language skills in the area of investment and finance.</li> <li>For their operations, a company needs assets, which have to be financed.</li> <li>Financial resources could be given by equity and/or debt investors.</li> </ul>

	The course deals with the challenge of a company to meet the expectations of investors. Therefore, the planning and calculation of financial resources of a company is key in the investment field.  The funding of these needs is the basis for the finance part of the course. The focus in this area is on the possibilities of internal and external financing as well as equity and debt financing.
Textbooks:	Brealey, R, Myers, S, Allen, F, current edition. Principles of Corporate Finance, McGraw Hill.  Zantow, R., aktuelle Auflage. Finanzierung: Die Grundlagen modernen Finanzmanagements, Pearson Studium.  various articles
Assessment	Graded: Oral exam 15 min

Accounting		
Study Program International Project Engineering		
Study Program		
Study level and semester	Bachelor, 2 <sup>nd</sup> Semester	
ECTS Credits	3	
Hours per week /	2/30	
total contact hours		
Total hours of study	90	
Type/Teaching Method	Lecture, case studies	
Language of instruction	English	
Frequency	Every Semester	
Course	Prof. Dr. Antje Brüsch	
Coordinator/Instructor	E-Mail: Antje.Bruesch@Reutlingen-University.DE	
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course	
Prerequisites:	Fundamentals of business administration	
Course learning	At the end of the course students should:	
objectives:	<ul> <li>Professional competencies</li> <li>have understood the holistic accounting system and should be able to explain the reasons / needs for the different segments of accounting.</li> <li>be able to use the appropriate measure or method in specific circumstances and can explain the impact on the financial figures of a company.</li> </ul>	
	<ul> <li>Methodological competencies</li> <li>be trained in analytical, methodical and economical competences, related to accounting in general.</li> <li>be qualified to define the required financial information in specific situations and should be able to evaluate the financial health of a company and deduce a clear statement.</li> </ul>	
	<ul> <li>Social competencies</li> <li>learned to deal with each other and develop respect for one another through group discussions and practical exercises in teams.</li> </ul>	
	<ul> <li>International competencies</li> <li>Improved their English language skills in the area of managerial accounting.</li> </ul>	
Contents:	Today, accounting is called 'language of business'. The course deals with the challenge of a company to record and report the appropriate information depending on different information addressees (Shareholder, Stakeholder, Manager, etc.).  Therefore, the course deals with four segments of accounting:  • double entry accounting	
	- additionally accounting	

	<ul><li>cost accounting</li><li>planning and shows relationships between these aspects.</li></ul>
Textbooks:	Taschner, A., Charifzadeh, M., aktuelle Auflage. Management and Cost Accounting, Wiley. Olfert, K., aktuelle Auflage. Kostenrechnung, Kiehl. various articles
Assessment	Graded: Oral exam 15 min

Project Budgeting and	Controlling
Study Program	International Project Engineering
Study level and semester	Bachelor, 4 <sup>th</sup> Semester
ECTS Credits	5
Hours per week /	4 / 60
total contact hours	
Total hours of study	210
Type/Teaching Method	Lecture, case studies, group tasks, e-learning
Language of instruction	English
Frequency	Every Semester
Course	Prof. Dr. Antje Brüsch
Coordinator/Instructor	E-Mail: Antje.Bruesch@Reutlingen-University.DE
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course
Prerequisites:	
Course learning	After course completion, students:
objectives:	Professional competencies
	<ul> <li>can deduce a cost baseline.</li> </ul>
	<ul> <li>are able to use and adapt techniques for cost and risk analysis.</li> </ul>
	<ul> <li>are able to develop a budget.</li> </ul>
	<ul> <li>are able to define recovery measures.</li> </ul>
	<ul> <li>are able to define the structure of a multi project.</li> </ul>
	<ul> <li>Methodological competencies</li> <li>are able to understand the needs of multi project and single project control.</li> <li>are able to apply the methods used in multi and single project control.</li> <li>are able to forecast future trends.</li> <li>are able to structure and plan projects.</li> <li>are able to estimate the effort to reach project targets.</li> </ul>
	Social competencies  are able to report (interim) results, according to the needs of information addressees.
	International competencies  improved their English writing skills with group tasks and case studies
Contents:	<ul><li>improved their English writing skills with group tasks and case studies.</li><li>Empirical surveys show, that:</li></ul>
	20% of all IT-Projects will be cancelled
	<ul> <li>Every second project will overrun time and / or will be more expensive</li> <li>Probability of failures rise with duration time and complexity!</li> </ul>

	The course deals with the challenge, to define a proper baseline for a project and deduce (based on that baseline) a realistic budget as benchmark for the following controlling process.  Therefore, students should reach the capability to define a proper baseline (plan), control complex projects and provide appropriate information to decision makers during the project.  Overall, students should understand the necessity of project budgeting and controlling and learn to consider the management accountant as their "partner" in order to support the decision making throughout the project on all hierarchical levels
Textbooks:	Fiedler, R., aktuelle Auflage. Controlling von Projekten, Vieweg Verlag. Horngren, C.T. et al., current edition. Introduction to Management Accounting, Pearson. Kerzner, H., current edition. Project Management: A Systems Approach to Planning, Scheduling, and Controlling, John Wiley & Sons. Various articles

Plant Engineering	
Study Program	International Project Engineering
Study level and semester	Bachelor, 4 <sup>th</sup> Semester
ECTS Credits	6
Hours per week / total contact hours	4 / 60
Total hours of study	180
Type/Teaching Method	Lecture (70%) with integrated exercises (30%)
Language of instruction	English
Frequency	Every Semester
Course Coordinator/Instructor	Prof. DrIng. Georg Samland  E-Mail: Georg.Samland@Reutlingen-University.DE
Restrictions	
Prerequisites:	
Course learning objectives:	After the completion of the course, students:  Professional competencies  - know the components used in typical plants.  - are able to read and interpret P&ID-diagrams  - are able to discuss plant-engineering problems.  - are aware of HAZOP-studies and SIL-categories.  - are able to calculate and size typical piping configurations.  Methodological competencies  - have fundamental knowledge in plant engineering and they are able to discuss safety issues.  - They have the competency to lead a discussion and to make decisions in a plant engineering project.  Personal competencies  - are able to make decisions on their own and they can set up appropriate documents.
Contents:	Scaling and cost estimation of plants Safety Issues and HAZOP-Studies Block-diagram, flow-diagram, P&ID Diagram, Main components (Motor, compressors, pumps, piping, heat exchanger, instrumentation) Measurement devices for e.g. mass flow, temperature, velocity, vibration Sizing of pipes

Course Coordinator/Instructor	Prof. Dr. Kerstin Reich E-Mail: kerstin.reich@Reutlingen-University.DE
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course.
Prerequisites:	
Course learning objectives:	After successful completion, students:  Professional competencies  have understood the scope of different cultural models and have the ability to transfer and  apply theoretical knowledge to real-life settings.  have achieved a deeper understanding of cultural differences (e.g. national, regional but  also on group level).  have achieved the competences in leading international teams, negotiating strategies and  business behavior.  Methodological competencies  can analyse case studies and critical incidents in an intercultural context.  can apply cultural dimensions and theoretical background to real-life settings.  Social competencies/ International competencies  have awareness of different values and cultural imprinting.  have a set of tools in order to react in a flexible way in cultural situations.  improved oral and written communication skills.  can give and receive feedback from fellow students in a structured and constructive manner.

	<u>Personal competencies</u>
	- have awareness of one's own personality and its relation to other cultures,
	understand one's own personality and its implications to teamwork.
Contents:	Overview of main intercultural management concepts and approaches
	Verbal and non-verbal communication concepts
	Training individual intercultural competences
	Self-assessment
Textbooks:	Browaeys, MJ., Price, R. Understanding Cross-Cultural Management, FT Press, newest edition.

ECTS Credits	3
Hours per week / total contact hours	2/30
Total hours of study	60
Type/Teaching Method	E-Learning course
Language of instruction	English
Frequency	Every Semester
Course	Silvia Casellato
Coordinator/Instructor	Silvia.Casellato@Reutlingen-University.DE
Restrictions	
Prerequisites:	This course requires a weekly continuous active participation throughout the whole semester! Participation is continuously assessed.
Course learning objectives:	This course will introduce you to reading and writing scientific work and its underlying scientific principles and methods. The goals is to support you in finding, collecting, classifying and interpreting existing scientific papers as well as to practice writing own pieces, presenting your work and putting your results critically into perspective. These are required competences for writing lab reports, documenting your international practical internship or writing your bachelor thesis as well as your future professional career. The course is suitable for students of any semester.
Contents:	The course is designed as a synchronous e-learning course accessible in Relax. e-learning means you can take this course anywhere where you have a computer and internet access, i.e. during your practical semester, from home or at university. Synchronous means the course is timed and every week you will be required to work through new material, research, read, write and submit a certain piece of writing. Despite the flexibility in location, you will extensively work with your peers by reviewing their work and discussing improvements.  The examination method is continuous assessment; hence, you will only pass this course if you have made enough successful weekly submissions. Apart from professional and methodological competences, you will acquire life-long learning competencies with this course.
Textbooks:	competences with this course.
Assessment	Graded: Continuous Assessment (CA)

	<u>university.de</u>
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course.
Prerequisites:	This is an advanced course requiring:
	University Level Math (Algebra, Analysis, Trigonometry); Physics basics; Electrical
	Engineering basics; Computer Science (basic knowledge how to design, test and
	implement software in any language); Electrical drives; Control Engineering
	basics.
Course learning	At the end of the course students:
objectives:	Professional competencies
	are able to choose technical components for a smart system
	<ul> <li>can define the system architecture with their mechanical, electronical, software and communication interfaces</li> </ul>
	understand and are able to fine tune and enhance existing image
	processing algorithms, communication infrastructures, graphical user interfaces
	and machine learning algorithms
	have integrated a smart system and understand its limitations and
	<ul><li>challenges</li><li>can evaluate possible applications for smart systems</li></ul>
	can evaluate possible applications for smart systems
	Methodological competencies
	can discuss the advantages and disadvantages of the application of new
	"smart" technology in various fields
	can identify needed project positions and set up a team for system  development
	<ul> <li>development</li> <li>can present the project status of the current smart system</li> </ul>
	- can present the project status of the current sinart system
	Social/Personal competencies
	are able to identify needed capabilities of different positions in a
	development team

	<ul> <li>can assign persons from a team to the needed positions in the project</li> <li>can cooperate within a heterogenous team and solve conflicts regarding different interests</li> <li>can design and implement a challenging technical system in a team</li> <li>have created a project documentation consisting of technical artefacts</li> </ul>
Contents:	Technology:
	Digital control and integration of microsystems, IoT principles its practical implementation, machine learning, AI, neural networks, predictive analysis, self-X-systems (learning, organizing, optimizing, repairing)
	Applications:
	Smart cities, IoT, smart traffic, smart society, digital business management, smart health
	Beyond:
	Business models, ecosystems for smart solutions
Textbooks:	Deep learning / Ian Goodfellow, Yoshua Bengio and Aaron Courville, The MIT Press, [2016]

Course	Anthony J Churchill MA
Coordinator/Instructor	E-Mail: anthony john.churchill@reutlingen-university.de
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course.
Prerequisites:	
Course learning	After course completion, students:
objectives:	Professional competencies
	- have made acquaintance with basic theoretical foundations and cutting-edge
	challenges of HR.
	<ul> <li>be familiar with and have the ability to apply important tools and techniques of HR planning.</li> </ul>
	- know how to deal with HR-related responsibilities in managerial positions
	and to conduct a selection process.
	Methodological competencies
	- be able to manage plan and control key HR activities.
	<ul> <li>be able to contribute to company strategy by designing appropriate HR solutions; critically assess HR concepts and their limitations.</li> </ul>
	Social competencies
	<ul> <li>be able to apply effective written and oral communication skills.</li> <li>be able to work in diverse teams.</li> </ul>
	be able to work in diverse teams.     be able to give and receive feedback.
	- have understood dynamics in social systems such as organisations or teams.
	Personal competencies
	<ul> <li>have the awareness of one's personality and its relation to job requirements.</li> <li>have understood how HR trends affect own employability and career planning.</li> </ul>
Contents:	HRM: Past and Future
	War of talents, employer branding

	Selection process
	Performance appraisal
	Compensation policies
	Retention and resignation
Textbooks:	Cascio, W. F., Boudreau, J. W. Short Introduction to Strategic Human Resource Management, University Press newest edition.  Dessler, G.: Human Resource Management, Pearson, newest edition.  Torrington, D., Hall, L., Taylor, S., Human Resource Management, Prentice Hall,
	newest edition.
Assessment	Graded: Written exam (1 h) plus project assignment

Product and Innovation	n Management
Study Program	International Project Engineering

Supply Chain Management	
Study Program	International Project Engineering
Study level and	Bachelor
semester	
ECTS Credits	3
Hours per week /	2/30
total contact hours	
Total hours of study	90
Type/Teaching Method	Project work, simulation game
Language of instruction	English
Frequency	Every Semester
Course	Prof. Dr. Antje Brüsch
Coordinator/Instructor	E-Mail: Antje.Bruesch@Reutlingen-University.DE
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course.
Prerequisites:	
Course learning	
objectives:	
Contents:	This course will introduce you to the overall topic of supply chain management. The simulation is mainly based on the ideas of the lean principles and the Toyota Production System (TPS).  The goals is to support you in building your proper "lean mindset" for working in production, in presenting appropriately indicators from the production environment and in working on further problems dealing with supply chains. These are required competencies for many internships as well as your future professional career. The course is suitable for students of any semester.  One third of the course are designed as an on-site simulation game — performed during two entire days. The additional case work will be distributed across the semester and will be graded. Further presentations (guest lecturers) or visits will complement the programme and add to the practical application of this subject.  The examination method is the mandatory participation in a two day simulation (attendance) and a project report including presentation about a case study. Apart from professional and methodological competences, you will acquire the appropriate mindset for working in or close to production areas. The number of participants is supposed to be superior to 6-8 students (or more) in order for the simulation to make sense.
Textbooks:	
Assessment	Graded: Project report, participation in simulation game (lab)

Marketing Project	
Study Program	International Project Engineering
Study level and semester	Bachelor, 3 <sup>rd</sup> Semester
ECTS Credits	5
Hours per week /	4 / 60
total contact hours	
Total hours of study	120
Type/Teaching Method	Lectures and practical marketing project
Language of instruction	English
Frequency	Every Semester
Course	Prof. Dr. Kerstin Reich
Coordinator/Instructor	E-Mail: kerstin.reich@Reutlingen-University.DE
Restrictions	
Prerequisites:	
Course learning objectives:	After successful completion of the course the students will have developed the following competences:
	Professional competencies
	Ability to critically discuss the scope of different marketing approaches.
	Can apply basic marketing concepts in (international) business situations.
	• Understand the importance of in-depth customer knowledge as well as being able to formulate marketing messages based on different needs, taking into consideration cultural differences. They have gained an insight into analytical methods and are able to apply the fundamentals of empirical research (e.g. define research questions and design data gathering method)
	Methodological competencies
	• Can develop marketing strategies based on the 4 Ps; transfer and apply theoretical marketing knowledge to real-life (international) business cases.
	• Can prepare a marketing plan, and display a basic level of competence in the empirical research process.
	Are able to run a digital marketing project
	Social competencies
	Refine oral communication skills.

	• Improved the ability to work in teams in order to solve a given complex marketing situation.
	Give and receive feedback from fellow students in a structured manner.
	International competencies
	• Experienced the challenges of international marketing in terms of the 4 Ps and cultural differences.
	Can critically analyze and discuss implications of real life international marketing mistakes.
Contents:	<ul> <li>Overview of different marketing ideas and concepts</li> <li>Marketing Mix (4Ps)</li> <li>Difference between B2B and B2C marketing</li> <li>Market Research</li> <li>Communication</li> <li>Positioning</li> <li>Marketing Plan</li> <li>Customer Value</li> <li>Branding</li> <li>Trends in digital marketing</li> </ul>
Textbooks:	Armstrong, G., Kotler, P. Marketing: An Introduction, Pearson, newest edition Chaffey, D., Ellis-Chadwick, F. Digital Marketing, newest edition Hollensen, S. Global Marketing, Pearson, newest edition Jobber, D. Fahy, J. Foundations of Marketing, McGraw Hill, newest edition
Assessment	Graded: Compulsory attendance of lectures and successful completion of marketing project.

Management Simulation		
Study Program	International Project Engineering	
Study level and semester	Bachelor, 6 <sup>th</sup> Semester	
ECTS Credits	3	
Hours per week / total contact hours	2/30	
Total hours of study	90	
Type/Teaching Method	Intensive Course which takes place after the semester	
Language of instruction	English	
Frequency	Every Semester	
Course Coordinator/Instructor	Prof. Dr. Kerstin Reich E-Mail: kerstin.reich@Reutlingen-University.DE	
Restrictions		
Prerequisites:		
Course learning	After successful completion, students:	
objectives:	Professional competencies	
	have applied methods and knowledge of how to evaluate a company's performance and understand its operations.	
	can make decisions under resource and competitive constraints and be able to revise decisions if requirements are changing.	
	Methodological competencies	
	have applied theoretical strategy and marketing models and evaluate their effectiveness in a business environment	
	can use financial data to analyse the company performance and develop measurement and decision support systems.	
	Social competencies	
	can Self-organize and work result-oriented under time pressure and deadlines	
	can identify and distribute work packages among team members	
	can integrate results back into group decision.	

	Personal competencies
	<ul> <li>have awareness of own personality and how time constraints as well as insufficient information is influencing one's behavior as well as the group dynamics.</li> </ul>
Contents:	<ul> <li>Introduction to the computer-based business game in which several groups of students compete against each other.</li> <li>Financial planning</li> <li>Production planning</li> <li>Human resource planning</li> <li>Strategy planning</li> <li>Marketing plan</li> <li>Preparation of a share-holder meeting</li> </ul>
Textbooks:	Business game manual (will be made available before the course commences)
Assessment	Graded: Online Test (first day), active participation

## Mechanical Engineering Bachelor

Heat Transfer	
Study Program	Mechanical Engineering
Study level and semester	Bachelor
ECTS Credits	6
Hours per week / total contact hours	4 / 60
Total hours of study	180
Type/Teaching Method	Lecture
Language of instruction	English
Frequency	Winter Semester (course in English running from October to December)
Course Coordinator/Instructor	Prof. DrIng. Bernd Thomas  E-Mail: <a href="mailto:bernd.thomas@reutlingen-university.de">bernd.thomas@reutlingen-university.de</a>
Restrictions	The course is designed for students from the following partner universities:  Valparaiso University, Kettering University, NC State University. A minimum number of 5 international students is required for offering the course in English. As tailored for students from the aforesaid Universities, the language of instruction is English until the exam for the international students in mid-December (Chapter 1-5). For the remaining lessons thereafter, which are assigned to Chapter 6, the language of instruction will be German.
Prerequisites:	Basic Math skills
Course learning objectives:	The objective of this course is to provide an insight into heat transfer problems. Topics covered include heat transfer by conduction, both multi-dimensional and non-stationary; convection and radiation; the design of heat exchangers. The focus is on the transformation of the physical problems into appropriate mathematical equations, in order to achieve the desired results.
Contents:	<ol> <li>Fundamentals</li> <li>Thermal Conduction</li> <li>Steady-state, 1-dimensional conduction, Integral approach</li> <li>Transient, 1-dimensional conduction</li> <li>Convection</li> <li>Thermal boundary layer and heat transfer coefficient</li> <li>Heat transfer correlations in case of forced convection</li> <li>Heat transfer correlations in case of free (natural) convection</li> <li>Thermal radiation</li> <li>Overall heat transfer, heat exchangers</li> <li>The overall heat transfer coefficient</li> <li>Heat exchangers</li> </ol>

	5.3 Fined surfaces
	6. Thermal conduction, differential approach
	6.1 Steady-state, 1-dimensional conduction
	6.2 Steady-state, 1-dimensional conduction incl. internal heat generation
	6.3 Steady-state, 2 and 3-dimensional conduction
	6.4 The transient differential equation
Textbooks:	F.P. Incropera, D.P. DeWitt, T.L. Bergmann, A.S. Lavine
	Introduction to Heat Transfer
	John Wiley & Sons, 6th ed., 2011
	T.L. Bergmann
	Fundamentals of Heat and Mass Transfer
	John Wiley & Sons Inc, 8th ed., 2016
Assessment	Graded: Written exam, 2 hours

Design Methodology	
Study Program	Mechanical Engineering
Study level and semester	Bachelor, 4 <sup>th</sup> Semester
ECTS Credits	3
Hours per week / total contact hours	2/30
Total hours of study	90
Type/Teaching Method	Lecture
Language of instruction	English
Frequency	Every Semester
Course Coordinator/Instructor	Prof. DrIng. Steffen Ritter  E-Mail: Steffen.Ritter@Reutlingen-University.DE
Restrictions	None
Prerequisites:	Engineering Design Basics (~ 400 class)
Course learning objectives:	Methodology of technical problem solution esp. product development, analysis, evaluation and selection of design alternatives
Contents:	The course covers the methodology for engineering development projects- Students will learn "tool" by "tool" the essentials of a correct and ideal product development process on a base of systematic solution finding.  A. Introduction B. General Tools C. Design Process VDI 2221 D. Product Specification E. Systematic Idea Finding F Problem Abstraction G. Physical Working Principles H. Concept Selection I. Design Objectives K. Eco Design
Textbooks:	All handouts will be provided by the professor
Assessment	Graded: Assignments

	E-Mail: michael.lauxmann@reutlingen-university.de
Restrictions	None
Prerequisites:	Strength Analysis
Course learning	Strength Analysis of simple mechanical designs with the help of Creo Simulate
objectives:	(FEM Code)
Contents:	FEM deals with the analysis of structures subject to mechanical and thermal loads. Starting from CAD-Models we learn how to perform a static or dynamic FEM analysis, use the most often available tools and try to interpret the results. Topics such as boundary conditions and singularities, sensitivity and optimization analysis, screw and welded joints are covered. There are lectures where short presentations introduce the problems and labs where the students work on these problems.
Textbooks:	Creo Simulate 3.0 Tutorial, Roger Toogood
Assessment	Graded: Students are supposed to give presentations in the lectures and perform a group project.

Applied Acoustics	
Study Program	Mechanical Engineering, Mechatronics, International Project Engineering
Study level and semester	Bachelor
ECTS Credits	3
Hours per week / total contact hours	2/30
Total hours of study	90
Type/Teaching Method	Lecture, experiments, project task
Language of instruction	English
Frequency	Winter Semester
Course	Prof. DrIng. Stephan Pitsch
Coordinator/Instructor	E-Mail: Stephan.Pitsch@Reutlingen-University.DE
Restrictions	None
Prerequisites:  Course learning objectives:	Mathematics (analysis, differential equations, Fourier series, complex numbers) Physics (mechanics, oscillations) Programming experience (MATLAB) In this course, participants learn about fundamentals of acoustics, perform sound and frequency band analysis, use professional acoustic measurement
	equipment in order to determine acoustical quantities or design a reflection absorber (muffler).
Contents:	Fundamentals of acoustics (1st half of the term, obligatory)  Sound and its properties  Acoustical quantities (sound pressure, particle velocity, sound power, etc.)  Level calculation  Perception of sound  Sound sources and resonators  Sound propagation  Sound measurement and analysis
	Project tasks (2nd half of the term, elective) (participants choose one of the following projects)  Project 1: Sound power measurement (DIN 3744) Project 2: Room acoustical planning (DIN 18041) Project 3: Reflection absorber design
Textbooks:	Lawrence Kinsler, A. F. (2000). Fundamentals of Acoustics. John Wiley & Sons.
Assessment	Graded: Written exam, Group project, Presentation

Data Science	
Study Program	Mechanical Engineering
Study level and	Bachelor
semester	
ECTS Credits	3
Hours per week / total	2/30
contact hours	
Total hours of study	90
Type/Teaching Method	Lecture
Language of	English
instruction	
Frequency	Every Semester
Course	Prof. Dr. rer-nat. Barbara Priwitzer
Coordinator/Instructor	E-Mail: barbara.priwitzer@reutlingen-university.de
Restrictions	A minimum number of 3 international students is required for offering the
	course in English.
Prerequisites:	
Course learning	<u>Professional competence</u>
objectives:	Students
	- understand how data can be used in an engineering context with the help of various analysis methods.
	Methodological competence
	Students can analyse data with the help of software;
	- can successfully apply and evaluate various data analysis methods.
	Social competence
	Students
	- know how to collect, analyse and interpret data responsibly without violating
	the privacy or rights of others;
	- can communicate complex data analyses and their results clearly and
	comprehensibly.
	Self-competence
	The students
	- can work independently, accurately and persistently;
	- are able to critically evaluate their own results.
Contents:	Exploratory data analysis:
	Graphical methods, central tendency of variables and their dispersion, outlier analysis, treatment of missing values

	Fundamentals of regression, evaluation measures and applications, multilinear and generalised linear models <u>Classification:</u> Definition of a classification problem, evaluation, methods for classification from machine learning, feature selection and normalisation
Textbooks:	Joel Grus: Data Science from Scratch: First Principles with Python, O'Reilly 2015
	Matthias Plaue: Data Science: An Introduction to Statistics an Machine Learning, Springer 2023

## Mechanical Engineering Master

Numerical Analysis	
Study Program Study level and semester	Mechanical Engineering Master, 1 <sup>st</sup> Semester
ECTS Credits	3
Hours per week / total contact hours	2/30
Total hours of study	90
Type/Teaching Method	Lecture
Language of instruction	English or German (depending on the demands of the participants)
Frequency	Every Semester
Course Coordinator/Instructor	Prof. Dr. rer. nat. Barbara Priwitzer  E-Mail: <a href="mailto:barbara.priwitzer@reutlingen-university.de">barbara.priwitzer@reutlingen-university.de</a>
Restrictions	None
Prerequisites:	<ul> <li>Basic courses in Mathematics, especially:</li> <li>basic analysis of functions of one and several variables</li> <li>theory of ordinary differential equations (ODEs)</li> <li>linear algebra</li> </ul>
Course learning objectives:	<ul> <li>Awareness of the problems that can arise when solving mathematical problems numerically.</li> <li>Knowledge of basic algorithms for the classical tasks in numerical analysis (solving equations, integration,).</li> <li>Assessing the quality of numerical solutions.</li> <li>Improving programming skills.</li> </ul>
Contents:	<ul> <li>Floating point arithmetic</li> <li>Conditioning of numerical problems</li> <li>Direct and iterative methods for solving systems of linear equations</li> <li>Polynomial and Spline interpolation</li> <li>Numerical solution of initial value problems in ordinary differential equations</li> </ul>
Textbooks:	<ul> <li>Gisela Engeln-Müllges/ Klaus Niederdrenk/ Reinhard Wodicka: Numerik-Algorithmen, 10. Auflage, Springer 2010</li> <li>E. Süli/ D.F. Mayers: An introduction to numerical analysis, Cambridge University Press, 2003</li> <li>Masayuki Yano/ James Douglas Penn/ George Konidaris/ Anthony T Patera: Maths, Numerics and Programming for Mechanical Engineers, MIT Open Course Ware 2013</li> </ul>
Assessment	Graded: problem sheets + written exam (60 min)

Partial Differential Equations		
Study Program	Mechanical Engineering	
Study level and semester	Master, 1 <sup>st</sup> Semester	
ECTS Credits	3	
Hours per week / total contact hours	2/30	
Total hours of study	90	
Type/Teaching Method	Lecture	
Language of instruction	English	
Frequency	Every Semester	
Course	Dr. rer.nat. Reinhard Honegger	
Coordinator/Instructor	E-Mail: reinhard.honegger@reutlingen-university.de	
Restrictions	None	
Prerequisites:	Ground courses 1 and 2 in Mathematics. Especially, the analysis of functions of several variables, and the theory of ordinary differential equations (ODEs) of first and second order.	
Course learning objectives:	Beside an interpretational appreciation, we learn in the course how to solve - mostly analytically but also numerically (with finite differences) - the basic types of linear homogeneous PDEs with two variables: transport equations, the wave equation, the diffusion or heat flow PDE, and the Laplace equation.	
Contents:	The fundamental understanding of the physical world around us, but also of many technical, biological, chemical, economical, or even social processes is based on partial differential equations (PDEs). Main examples are the vibrations of strings and solids, the flow of fluids, the diffusion of chemicals, the spread of heat, the structure of molecules, the emission of photons from atoms, molecules, or superconductors, and the radiation by electromagnetic waves. The lecture is divided into three parts: theory, examples, and the discussion of exercises you have done as homework.	
Textbooks:		
Assessment	Graded: There is one assignment and a written exam (60 min)	

Numerical Structural Mechanics		
Study Program	Mechanical Engineering	
Study level and semester	Master, 2 <sup>nd</sup> Semester	
ECTS Credits	7	
Hours per week / total contact hours	6 / 90	
Total hours of study	210	
Type/Teaching Method	Lecture and laboratory assignments	
Language of instruction	English	
Frequency	Every Semester	
Course	Prof. DrIng. Michael Lauxmann	
Coordinator/Instructor	E-Mail: michael.lauxmann@reutlingen-university.de	
Restrictions	Only taught in English if demanded by 3 international students at the minimum	
Prerequisites:	Numeric, Partial Differential Equations	
Course learning	Getting to know the basics of the multibody and finite element method in terms	
objectives:	of their theoretical principles and their practical use	
Contents:	The course starts with an introduction on different modelling technics. It considers various aspects of multibody system dynamics including the theoretical basics of kinematics and kinetics as well as principles of mechanics. Later on an introduction in finite element systems follows, focusing on static and basic transient stress analysis applications. By means of examples out of the field of mechanical engineering, special focus is given on dynamical phenomena. Lectures and exercises alternate in an adequate manner to complete the understanding of the topics. The exercises comprise both manual exercises on a piece of paper as well as computer—aided exercises in the simulation laboratories with the help of Ansys and Matlab.	
Textbooks:	Technische Dynamik, Schiehlen, W. und Eberhard, P. ;	
Assessment	Finite element procedures, Bathe, KJ.	

Basic Principles of Energy Conversion		
Study Program	Mechanical Engineering	
Study level and semester	Master, 1 <sup>st</sup> semester	
ECTS Credits	3	
Hours per week / total contact hours	2/30	
Total hours of study	90

Frequency	Every Semester	
Course Coordinator/Instructor	Prof. DrIng. Frank Truckenmüller  E-Mail: Frank.Truckenmueller@Reutlingen-University.DE	
Restrictions	Only taught in English if demanded by 3 international students at the minimum	
Prerequisites:	Understanding of fundamentals of thermodynamics	
Course learning objectives:	Understanding of the fundamentals of conversion of energy applied to different processes and option for improvement	
Contents:	<ol> <li>Global energy consumption and future global development</li> <li>forms of energy and energy concepts and the theoretical foundations</li> <li>Energetic evaluation criteria; efficiency, energy-harvesting factor etc</li> <li>Apply the thermodynamic assessment criteria on combustion and associated cycles in thermal power plants; Steam turbine, gas turbine, combustion engines</li> <li>Energy Conversion at the examples of the pumped storage power plant and wind power</li> <li>Energy Conversion at the examples of the fuel cell and photovoltaic</li> <li>Energy Conversion examples of biogenic energy conversion</li> <li>Energy Conversion at the example of solar thermal</li> <li>Criteria for assessment of energy storage</li> </ol>	
Textbooks:		
Assessment	Graded: Project, presentation and exam	

## **Mechatronics Bachelor**

Electrical Drives	
Study Program	Mechatronics
Study level and semester	Bachelor, 6th Semester
ECTS Credits	4
Hours per week / total contact hours	3 / 45
Total hours of study	120
Type/Teaching Method	Introductory lecture session. All following sessions will be taking place as tutorials and practical trainings in the laboratory
Language of instruction	Course materials, exam and lab assignments will be provided in English.
Frequency	Every Semester
Course Coordinator/Instructor	Prof. DrIng. Gernot Schullerus  E-Mail: gernot.schullerus@reutlingen-university.de
Restrictions	None
Prerequisites:	Mathematics
	Fundamentals of electrical engineering
	Principles of mechanics
Course learning objectives:	Students are familiar with the structure, the operating principles and the behaviour during operation of the following drive types: dc-machine induction machine permanent magnet synchronous machine brushless dc-motor stepper motor
	Students are able to choose and do the dimensioning for an electrical drive for a given application
Contents:	<ul> <li>Materials, standards and basic definitions</li> <li>DC-machine</li> <li>Rotating field machines</li> <li>Brushless-DC motors</li> <li>Stepper motors</li> <li>Dimensioning of electrical drives</li> </ul>

Textbooks:	Lecture notes are provided
Assessment	Graded: Written exam (1h)

Interactive Robots in M	lotion
Study Program	Mechatronics
Study level and semester	Bachelor, 7th semester
ECTS Credits	3
Hours per week / total contact hours	2/30
Total hours of study	60
Type/Teaching Method	Lectures, Practical Training and Projects
Language of instruction	English
Frequency	Every Semester
Course	Prof. Dr. rer. nat. Matthias Rätsch
Coordinator/Instructor	E-Mail: matthias.raetsch@reutlingen-university.de
Restrictions	
Prerequisites:	
Course learning objectives:	The students know the fundamentals of the interaction and collaboration of intelligent robots with humans in the times of industry 4.0 and the change from industrial robots to intelligent, autonomous and collaborative systems, which are one day hardly distinguishable from humans.  Students appreciate that robots are getting faster, stronger and more intelligent and therefore why they are better at playing chess, Go and StarCraft II. Students will acquire knowledge and will be able to answer questions about AI and robotics, in areas such as: How and when is the Turing Test "applied"?  Secrets of non-verbal interaction? Avatars in computer games and virtual worlds? How do Google Glass + Siri work and what can they be used for? Will robots be the better humans? Will they replace us in my future career? What means super intelligence, singularity and transhumanism?  The students are familiar with current developments in the field of collaborative, intelligent robots, have initial experience in the practical use of these systems and can assess the effects on the areas of our life.  An optional follow-up project can be selected to consolidate the learning objectives.
Contents:	<ul> <li>Basics of modern 3D sensor technology in mobile robotics.</li> <li>Artificial intelligence for autonomous and collaborative robots.</li> <li>Autonomous localization and navigation using monocular SLAM techniques.</li> <li>Verbal and non-verbal interaction between robots and humans.</li> <li>The use, impact and vision of the new generation of intelligence and robots.</li> </ul>

	- Practical approach to interactive, mobile and collaborative robots, as well as SDKs.
	- Design and development of concepts, modules and prototypes for leading collaborative robots in industrial projects or for RC@Home.
	- if applicable, continuation of the successes of the world champion team.

Machine Vision and Ar	tificial Intelligence Lecture with Laboratory
Study Program	Mechatronics
Study level and semester	Master, 2nd Semester
ECTS Credits	6
Hours per week / total contact hours	5 / 75
Total hours of study	180
Type/Teaching Method	Lectures and Presentations
Language of instruction	English
Frequency	Every Semester
Course	Prof. Dr. rer. nat. Matthias Rätsch
Coordinator/Instructor	E-Mail: matthias.raetsch@reutlingen-university.de
Restrictions	Only 5-6 international Students at the maximum can be admitted to this course
Prerequisites:	
Course learning objectives:	The students are familiar with the basics of machine learning (artificial intelligence) and the use of image processing in industrial environments and especially in the robotics and automotive industries. They will be able to create algorithms for simple application examples, which will then be implemented and tested in practical courses and projects.  The students are capable of putting together an intelligent image processing system from available components which they can then use to complete simple tasks. The students are proficient in 3D sensors as well as 3D image and video processing, which they will then apply hands-on in projects with interactive mobile robots and assistance and service systems.  The students will discuss and be familiar with the social challenges and opportunities of AI as well as questions of social ethics and acceptance research  - Basics: Components of a Learning Machine Vision System
Contents.	<ul> <li>- Basics: Components of a Learning Machine Vision System</li> <li>- Data recording: camera technology, pre-processing, colour display, optics, lighting technology</li> <li>- Data processing (feature extraction, image analysis, feature extraction, classification/segmentation, error analysis)</li> <li>- Feature extraction: convolution, low pass, high pass, morphological filter feature space transformation: Chain rule, contour slider, applications - error analysis: FAR/FRR, lin. separable, error class analysis, efficiency - AI basics: Boolean and Fuzzy logic, classification, definition KI, Turing test, world knowledge theory ML: learning styles, DTree, Random Forests, NN, Perceptron, SVM (Lin/Non-lin, Kernel Trick)</li> </ul>

	- 3D Image Processing (3D Sensors; RGB-D, TOF, Stereo; Shape from Shading/Motion, SLAM)- Video Processing (4D): Detection (Sliding Window, Image Pyramids, Sampling Theorem, Frequency Analysis, Compression, Blending), Tracking (Condensation, Motion Detection)
	- Model based machine learning: face modelling (representation of 3D data, data procurement for 3D data, morphable face model) PCA (data/corr/loading matrix, SVD, dim reduction, eigenvalue problem, eigenfaces)
	- Deep Learning - CNNs: Meaning, Difference NN to CNN, Layer Types, Convolution, Pooling, ReLu, Applications- History and visions of Al: Exp. Growth, Singularity, Transhumanity, Society. Challenges/opportunities for action, social ethics, acceptance
Textbooks:	Script based on the lecture slides.
	Corke, P.: Robotics, Vision and Control. Springer, Berlin.
	Jähne, B.: Digitale Bildverarbeitung. Springer, Berlin.
	Demant, C.; Streicher-Abel, B.; Springhoff, A.: Industrielle Bildverarbeitung: Wie optische Qualitätskontrolle wirklich funktioniert. Springer, Berlin.

rrequericy	, and the second
Course	Prof. DrIng. Antonio Notholt
Coordinator/Instructor	E-Mail: antonio.notholt@Reutlingen-University.DE
Restrictions	
Prerequisites:	
Course learning	The students are familiar with technologies and processes of the production of
objectives:	electrical energy from renewable sources. They are able to perform a simple
	layout of installations. They know the key indicators and know how to apply
	them for assessing and comparing different installations. They are familiar with
	systemic components, common communication and information technologies as
Cantanta	well as the potential of selected future innovations.
Contents:	Energy and climate protection  Solar radiation
	Photovoltaics wind power
	Hydroelectric power
	Geothermal energy
	Use of biomass
	Hydrogen generation, fuel cells and methanation
	Economic efficiency calculations
	Simulation
	Communication and Information Technologies
	Integration of renewable energies in electrical grids
Textbooks:	Volker Quaschning, Regenerative Energiesysteme: Technologie - Berechnung - Simulation. ISBN 978-3-446-44267-2
Assessment	Graded: Presentation, seminar paper

Control Systems	
Study Program	Mechatronics

Language of instruction	English
Frequency	Winter Semester
Course Coordinator/Instructor	Prof. Dr. Thorsten Zenner
	E-Mail: thorsten.zenner@reutlingen-university.de
Restrictions	
Prerequisites:	Basic knowledge of communication technologies as presented in lecture "communication systems" At least one exam in electrical engineering, informatics or communication systems
Course learning objectives:	Students will have a deeper understanding of state of the art communication technologies like radio communication, IEEE802.x (Ethernet, WLAN, Bluetooth LE), ethernet based fieldbusses and security. They will be able to evaluate different communication technologies according to specific performance indexes like throughput, realtime, security, etc.
Contents:	Physical and technical basics of radio communication. IEE802.x communication (Ethernet, WLAN, Bluetooth) and 6LOWPAN (RFC 6282), Security (Encryption, hash-functions, digital signature, certificates), Functional Safety, ethernetbased fieldbusses (Ethercat, Powerlink, Profinet IRT)
Textbooks:	Lecture notes are provided in German, Andrew Tanenbaum u. a.: Computer Networks, 5. Auflage, Pearson Education Limited, (2014)
Assessment	Graded: oral exam
